

Webflow Developer

Hello! 🙋 Are you curious, passionate and have a taste for challenges? Do you wish to develop your strategy skills in an innovative and multinational environment?

At [eShard](#), we specialize in securing digital systems, particularly those embedded in critical and high-impact technologies — smartphones, electric vehicles, drones, and even medical devices. These systems are built on layers of software and hardware from various sources, raising a crucial question: How can we trust their security?

Our answer is expertise. We empower industries and government agencies with deep knowledge of security threats — both hardware-based, with [esDynamic](#), and software-based, with [esReverse](#). Our solutions revolve around a collaborative security platform, allowing experts to work together, access specialized tools, and conduct advanced security testing efficiently.

From hardware attacks on semiconductor chips to cutting-edge post-quantum cryptography (PQC) research, we have built a unique expertise over the past decade. Our [Time Travel Analysis](#) technology revolutionizes software security testing, enabling system-wide traceability to analyze vulnerabilities in forward and backward execution.

By uniting expertise, tools, and collaboration, **eShard transforms the way security professionals master digital risk** — helping organizations move from isolated expertise to collective intelligence.

For that, we have assembled a great team of specialists, and you could be one of them!

→ 📅 **Desired start date:** as early as possible.

*This opportunity is open to candidates of all educational backgrounds. We base our recruitment processes on skills and expertise, regardless of ethnic origin, age, or gender, and all our positions are open to people with disabilities. **If you're not from France, please ensure you have a valid work visa.***

The project:

We are rebuilding our company website on Webflow. The goal is simple: turn a strong Figma design into a clean, fast, well-structured website that is easy to maintain, SEO-ready, and polished in its interactions.

This is a contract freelance role. The mission ends when the website goes live.

You will work closely with our marketing team and the CEO, iterating regularly to ensure the final result matches both the design intent and the business goals.

You will be responsible for all technical aspects of developing the website in Webflow. This includes translating Figma designs into a production-ready Webflow site, setting up the CMS, implementing animations, and ensuring the site is performant, accessible, and SEO-friendly.

Project scope

- Webflow website built from provided Figma designs
- Around 5 page templates
- Blog powered by Webflow CMS
- Light interactions and animations as defined in the designs
- Technical SEO implementation
- Fully remote project, international candidates welcome

Key responsibilities

- Build the full website in Webflow based on Figma designs
- Accurately implement layouts, spacing, typography, and components
- Integrate light animations and interactions defined in the design
- Set up and structure the Webflow CMS for the blog
- Implement technical SEO best practices
 - Clean HTML structure
 - Proper heading hierarchy
 - Meta titles and descriptions
 - URL structure
 - Performance optimization
- Ensure responsiveness across desktop, tablet, and mobile

- Collaborate closely with marketing and the CEO through regular reviews
- Prepare the site for launch and handover

You're perfect for us, if you have...

- Proven experience building production websites with Webflow
- Solid knowledge of responsive web design
- Comfortable implementing light interactions and animations in Webflow
- Good understanding of technical SEO fundamentals
- Attention to detail and clean implementation practices

Nice to have

- Experience working with marketing teams
- Sensitivity to branding and design consistency
- Experience delivering B2B or tech company websites

Interested?

Our hiring process includes an initial screening call, a skills assessment test, and interviews with the hiring manager and/or other team members. The selected candidate will receive an offer within a few days.
