

esChecker

by  eShard

Do you trust your Mobile Application Security Protections?

Can you protect your business and your users from hackers and abusers?

Without the right level of protection, your Mobile Application is **an open door to critical risks**.

- Fraudsters that **work around protection** to access protected information or to bypass the payment wall
- End-users that are victim of hackers, leading to **personal data leaks**

Ensuring that your protection shield is always up is the key step.

On-Demand Security Testing Campaigns

Whether you need to **check your security levels** or you're looking for a **compliance seal** (OWASP), esChecker audits your application in less than 30 minutes:

- 1 Upload your **app binary**,
 - 2 Define the **tests** you want to run,
 - 3 Record the **User Journey** you want to test,
 - 4 Run the **campaign**.
- That's all.

esChecker, your Mobile Application Security Testing companion

esChecker is a simple, yet robust, mobile app security testing tool, providing **comprehensive security audits** as well as **protection recommendations**.

Automated Testing Campaigns using our powerful API

Run automated esChecker campaigns in your CI/CD pipeline straight from Jenkins, CircleCI, etc. to **continuously test your security protection**.

MASVS-L2 & MASVS-R Security Levels are natively supported.

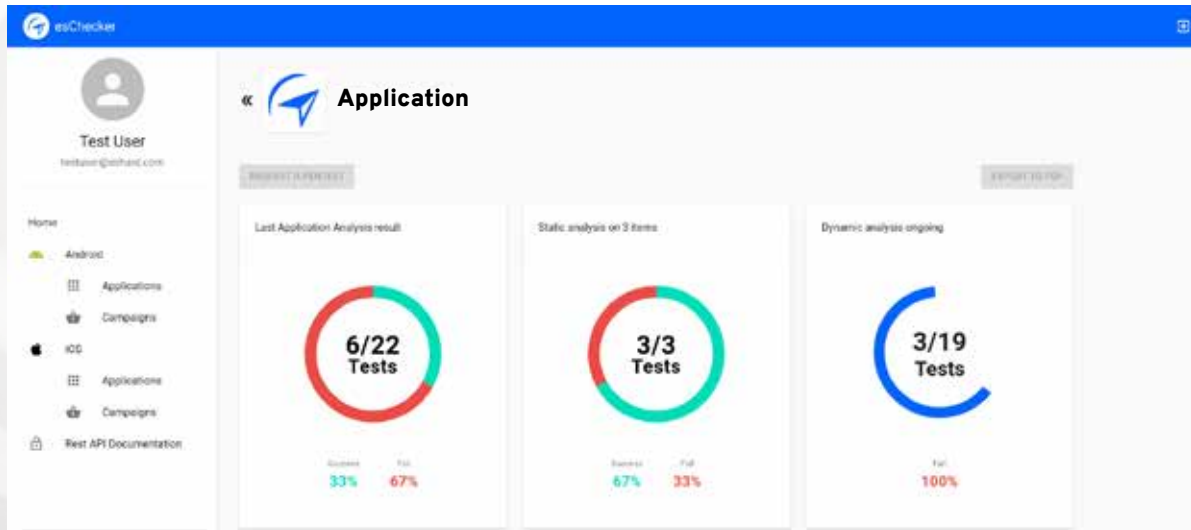

Ever-growing security test catalogue

Our Mobile App Security Experts create new tests to stay on track of the potential threats you could face.

- **SAST:** Static Tests run on your app binary
- **DAST:** Dynamic Tests run when using the app

Campaign results & defense score

Once esChecker is done testing your app, you get a full evaluation of the Defense Score and you can watch a video replay of each test to see where the application failed to pass the tests.

In a nutshell

- 1 Video replays of the tests and visual proof of success/failure
- 2 Custom Security Tests, as well as OWASP recommendations
- 3 Autonomous access to the product with a secure SaaS platform
- 4 Automation of campaign runs using the API (CI/CD)

Try it yourself!

Actions speak louder than words, contact us right now and get your results in **30 minutes!**
